DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to apparatuses and methods for forming three dimensional specimen shapes, classified in class 250, subclasses 310 and 307.
 - II. Claims 20-25, drawn to a reference template and method of manufacturing the reference template, classified in class 250, subclass 491.1.
1. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claimed combination does not require a reference template made with any specific device or method such as an electron beam. Any other suitable method/device could be used – e.g. ion beam deposition or ion beam, UV, or x-ray lithography. The subcombination has separate utility such as being used in a lithography or imaging device; e.g. alignment of masks (or irradiation locations) in projection or proximity lithography.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
